Kitsui & Køni.

KITSUI

KØNI

KITSUI · AKA KITSUIWEBSTER

From Haute-Savoie in the French Alps, Kitsui is a 25-year-old artist who has lived for music since the age of 13 and shares it without holding back. Coming from production and beatmaking, he stands out for his ease with captivating toplines: a voice carrying melodies that are at times ethereal, often spellbinding, across genres.

15+ RELEASED TRACKS · 150+ RECORDED

KØNI

Born in Geneva, Køni has been passionate about music from a very young age, and writes every one of his lyrics to carry the listener somewhere. Each word brings a striking reflection on lived experience and builds a world where anyone can recognise themselves and move forward, without judgement.

25+ RELEASED TRACKS · 150+ RECORDED

THE DUO

Together, Kitsui & Køni are a French-Swiss duo bringing two complementary pens to the same stage: fully sung sets processed in real time, backed by a DJ and a dedicated vocal processing engineer. A balance of melody, writing and live energy.

~60,000 LISTENERS · ~143,000 SPOTIFY STREAMS · LAST 12 MONTHS

What we need on stage.

STAGE LINE-UP

2 singers · 1 DJ (Gary Wallace / Djoolias) · 1 Auto-Tune and vocal processing engineer (Biggy). **Four people on stage in total.** The team may be joined by accredited photographers and videographers.

AUDIO · PLAYBACK

Backing tracks are played by the DJ. We provide 1 XLR Left (L) and 1 XLR Right (R). Please plan for **2 line inputs** at front of house.

AUDIO · VOCALS

We need **3 wireless mics + 3 wireless receivers**. The receivers must sit close to our stage rack so they can be patched straight into our audio interface. Every vocal goes through our processing before reaching the desk.

SIGNAL PATH

01 Wireless mic → 02 Wireless receiver → 03 Audio interface → 04 Vocal processing (Auto-Tune / effects) → 05 Front of house

Vocals are sent back to the desk through **3 independent mono XLR outputs** (Vocal 1, 2, 3), each on its own channel so they can be mixed individually.

MINIMUM PATCH

CHANNEL	SOURCE
1	Playback L
2	Playback R
3	Vocal 1
4	Vocal 2
5	Vocal 3

MINIMUM TOTAL: 5 INPUTS

POWER

Next to our set-up: **2 power strips (230V)**, 4 to 5 free sockets each, for laptops, audio interface, wireless receivers, Auto-Tune control, controllers and DJ gear.

SOUNDCHECK

20 minutes of soundcheck minimum before we play, which the real-time vocal processing makes essential:

- Check that the wireless mics work
- Check the routing: receivers → audio interface → desk
- Set the vocal processing (Auto-Tune, effects, levels)
- Check the level of the backing tracks
- Set the stage monitors
- Run the whole system once

DOCUMENTS PROVIDED

Before every show, our team hands the sound engineer a **printed tracklist** of the set, and the lighting engineer a **printed lighting tracklist** with the cues for the show.

FURTHER INFORMATION

For any technical question or specific request, please contact our team ahead of the event so we can guarantee the best possible conditions for the show.
